Source: LOUST · **Status:** Active · **Period:** 2024-03 (active)

TCP and DNS tuning plus connectivity diagnostics for ISP-constrained paths: surfaces the actual transport chain, not just ping.

Top outcomes

Bottleneck identification

Baseline: About 10 minutes of guessing and switching tools

Under 1 minute reading the chain

Profile switching

Baseline: Required daemon restart

Live switch in under 5 seconds

Tool startup time

Baseline: About 3 seconds (Electron baseline)

Under 1 second (Tauri)
